

## MARC Report Version 258

MARC Report is a program that validates RDA and MARC coding in bibliographic records. It checks for those many, many little details of RDA, MARC coding, and ISBD punctuation that are easy to miss so that errors can be fixed before records are imported into Polaris.

The latest version is MARC Report 258 and is available free of charge. No license or registration is required, and you can load it on as many computers as desired.

It's strongly recommended that cataloging libraries download and use MARC Report. It's a great product that helps both new and experienced catalogers produce accurate and consistent bibliographic records. And did we mention it's free?

### How to get MARC Report 258

If your library is currently using MARC Report 257, you can upgrade to the new version by clicking *Help* on the menu bar, then *MARC Report Update*. You will be directed to the download page. Note: admin privileges may be required to download.

If your library is not currently using MARC Report, go here to [get the latest version](#). Note: admin privileges may be required to download.
